INSTRUCTIONS TO STUDENT

1. This question paper consists of 4 pages (2 pages with 4 questions and 2 pages of Appendix). Key formulae are given in the Appendix.
2. Answer **ALL** questions.
3. Write your answers in the answer booklet provided.
4. All necessary working steps must be shown.

QUESTION 1

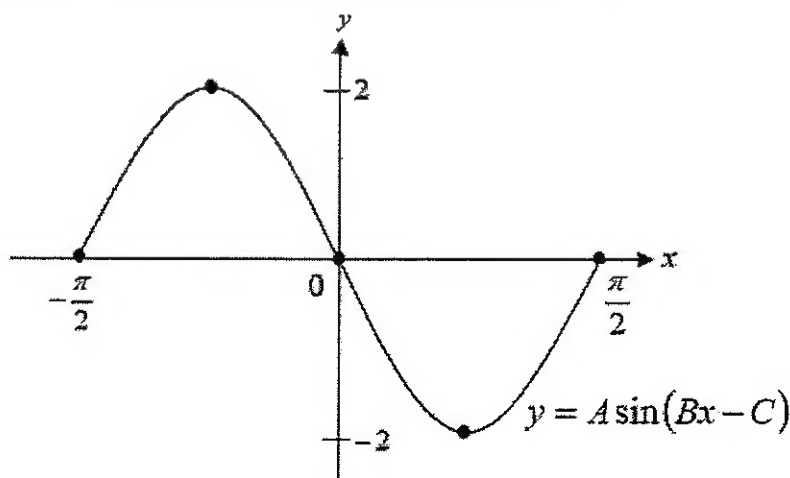

- a) Given $\sin \theta = -\frac{5}{13}$ and $180^\circ \leq \theta \leq 270^\circ$, find the value of $\cot \theta$. (3 marks)
- b) Madam Maria baked a round of chocolate pie in a 9-inch pie pan. She cuts the pie into six equal pies so that everyone gets the same sized piece.
(Use $\pi = 3.142$)

- i) Determine the central angle created by two pieces of pie, in radian. (1 mark)
- ii) Determine the length of arc of the two pieces of pie, in inch. (1.5 marks)
- iii) Determine the circumference of the original pie, in inch. (2.5 marks)
- c) If $\tan \theta = \frac{1}{\sqrt{2}}$, find $\csc \theta$ using Pythagorean Identities. Assume θ is an acute angle. (3 marks)
- d) Let $P = (3, -2)$ be a point on the terminal side of θ . With the aid of diagram, compute $\sin \theta$. (4 marks)

[TOTAL 15 MARKS]**QUESTION 2**

- a) Sketch and label completely for $y = -3 \cos\left(x - \frac{\pi}{2}\right)$, $0 \leq x \leq 2\pi$. (5 marks)
- b) Based on the graph below, find the amplitude, period and phase shift. Thus, rewrite the function in the form of $y = A \sin(Bx - C)$. (5 marks)

[TOTAL 10 MARKS]**QUESTION 3**

- a) Solve the given matrix equation to obtain the values of a , b and c . (5 marks)

$$4 \begin{pmatrix} 1+2a \\ 2-3b \\ 3-c \end{pmatrix} + \begin{pmatrix} -6 \\ 12 \\ 36 \end{pmatrix} = -3 \begin{pmatrix} 2a & 6b & 4c \end{pmatrix}^T$$

- b) The currents running through an electrical system are given by the following system of equations. The three currents, I_1 , I_2 , and I_3 , are measured in amps. Find the difference between I_3 and I_2 currents in this circuit.

(Hint: Use Cramer's Rule)

(8 marks)

$$I_1 + 2I_2 - I_3 = 0.425$$

$$3I_1 - I_2 + 2I_3 = 2.225$$

$$5I_1 + I_2 + 2I_3 = 3.775$$

[TOTAL 13 MARKS]**QUESTION 4**

- a) Find the sum of the sequence $\sum_{a=2}^5 \frac{1-a}{2^a}$ and represent your answer in fraction form. (2.5 marks)

- b) Given the first term of an arithmetic sequence is 5, and common difference is 3. Show that the sum of the 10th and 20th terms of the sequence is equal to 94. (1.5 marks)

- c) The sum to infinity of a geometric sequence is -8. If the first term is -4, find the common ratio. Hence, find the sum of the first 6 terms. (3 marks)

- d) Find the 4th and 7th term of the expansion $(x^3 - 3y)^{10}$. (5 marks)
